

LIVRILY – Complete Delivery & Shop Management Platform

A full-stack, real-time, luxury-themed web app for managing deliveries, shops, and orders – with Super Admin control.

Features

- **Client Storefront (index.html)** – public, no login, browse products, place orders, track status
- **Shop Owner Dashboard (ShopOwner.html)** – separate login, manage products, accept/reject orders
- **Manager Dashboard (Manager.html)** – create manual orders, assign drivers, live map, settlement
- **Driver App (Driver.html)** – receive orders, update status (picked/near/delivered), share GPS live
- **Super Admin (Admin.html)** – full control: create/manage managers, drivers, shop owners, view all data, fee settings, reset

Login Structure (Exact as requested)

Role	Login Page	Redirect	Who creates?
Admin	Admin.html	Own dashboard	Hardcoded UID/email
Manager	Login.html	Manager.html	Admin only
Driver	Login.html	Driver.html	Admin only
Shop Owner	ShopOwner.html	Own dashboard	Admin only
Client	index.html	No login	Public

All managers, drivers, shop owners are created/modified/deleted **ONLY by Admin** using secondary Firebase app (so Admin stays logged in).

File Structure

```
1 /index.html      → Client store (public, no login)
1 /Admin.html      → Super Admin (separate login, hardcoded)
1 /Login.html      → Combined Manager + Driver login (role-based redir
1 /Manager.html    → Manager dashboard (after login)
1 /Driver.html     → Driver dashboard (after login)
1 /ShopOwner.html  → Shop owner dashboard (separate login)
1 /README.md
```

Tech Stack

- Firebase Auth + Firestore (modular v11.10.0)
- Leaflet.js for maps (free)
- FontAwesome icons
- Pure HTML/CSS/JS – no build step

Setup

1. Create Firebase project
2. Enable Email/Password Auth
3. Firestore – start in test mode (then add rules)
4. Copy your Firebase config into ALL 6 HTML files (replace existing `config` object)
5. In `Admin.html` set your Admin UID + email:

```
js
```

```
const ADMIN_UID = "YOUR_UID";
const ADMIN_EMAIL = "your@email.com";
```

```
1 6. Deploy to static host (Firebase Hosting, GitHub Pages, Netlify, Ve
1
1 ## 💰 Fee Logic (Manager)
1 Configurable in Admin → Settings:
1 - `clientFeePerProduct` (default 10 DA)
1 - `driverAppFee` (default 10 DA)
1 - `feeType`: percentage (manager % of clientTotal) or fixed
1 - `defaultDeliveryPrice` (300 DA)
1
1 Calculation per order:
```

```
qtyTotal = sum qty
clientFee = qtyTotal * clientFeePerProduct
clientTotal = deliveryPrice + clientFee
managerFee = fixedFee OR clientTotal * managerPct / 100
driverOwes = managerFee + appFee
driverKeeps = clientTotal - driverOwes
```

```
1
1 ## 🗄 Collections Used
1 - `users` - role: manager/driver/shopOwner
1 - `drivers` - driver profiles
1 - `shops` - shopId = owner uid
1 - `products` - shopId field
1 - `shopOrders` - client → shop
1 - `orders` - shop accepted → manager/driver flow
1 - `locations` - driver live GPS
```

```
1 - `settlements` - manager settlement history
1 - `settings/global` - fees & theme
1
1 ## 📦 Free Tier
1 Optimized listeners, no Cloud Functions needed. Runs on Firebase Spar
